

The CoronaOne test-kit is designed for testing people on the Sars-Cov-2 virus. Customers get a package sent to their homes to collect a viral sample from their throat. The sample gets collected at their doorsteps and is sent to a laboratory for the diagnosis. The results are communicated via the lab soon as available.

The CoronaOne test-kit contains a swab specimen and all necessary extras that enable layman customer to collect a valid sample. A list of all items included, their respective prices per kit, and procurement information is provided below (exhibit 1).

Disclaimer: CoronaOne is not affiliated with any of the named companies below. The listed swab is may only be used within its certified and intended use, medical professionals only.
